---

Mr. Miller –

I just wanted to provide you an update regarding progress of sampling activities at Gulfco. I spoke with Kaitlin this morning, and she indicated they had a higher than normal tide this morning, which is going to allow for collection of the surface water sample from the location that had been dry. She also indicated that this situation will also allow collection of a pore water sample from one of the locations that had been dry. As such, they are now thinking that sampling activities will not be completed until sometime this Wednesday.

I will continue to provide you updates as I receive them. Please let me know if you have additional questions or comments regarding these matters.

Thank You,  
Mark Paddack  
EA Project Manager

Mark,

9543105

Two sample bottles broke in transit to the lab – Neil Henthorne found out at about 7:00 pm last night. We will be recollecting that pore water sample on Monday in addition to the surface water sample collection. I'll be headed out of Houston Tuesday morning rather than Monday night. They won't be done in time for me to get the get the last flight out Monday.

Kaitlin
